WHAT'S INSIDE

- 1 Track 1 — Semi-Hard Case Makers
- 2 Track 2 — 3D Printing Prototypers
- 3 Track 3 — Injection Moulding
- 4 Track 4 — Makerspace / FabLab

- Recommended Step-by-Step Sequence
 - Pricing Comparison Table
- WhatsApp Message Templates (Bahasa Indonesia)
 - Notes & Checklist Pages

RECOMMENDED SEQUENCE

What to do first, second, and third — before spending serious money

The Strategy in Plain English

You have two products at different prototyping stages. Neither has a finalised design yet. The smartest move is to start cheap and fast — use 3D printing to get something physical in your hands first, then hand that to a case/mould maker. Do NOT pay for injection moulds before you have a shape you're happy with.

Both products can follow the same 3-step flow:

01

Step 01 — Sketch !' 3D File

Use Lovable/AI tools to create reference images and rough dimensions. Then get a 3D design file made (DR3D offers this service). Without a file, no maker can quote you accurately.

WHO: You + DR3D or FabLab Bandung **COST:** IDR 0–500k (SGD 0–35)

02

Step 02 — 3D Print a Rough Prototype

Print in ABS or Nylon. For the spice kit — check if the size and compartment layout feels right. For the cooking kit — verify the shell shape and heat tolerance. Iterate fast, cost is low.

WHO: DR3D / Sultan 3D / FabLab **COST:** IDR 200k–2M (SGD 14–142)

03

Step 03 — Hand Off to Specialist Maker

Spice Kit !' Give the 3D print to Eureka/Intama to replicate in semi-hard EVA. Cooking Kit !' Give to PT Dinamika Polimerindo to build proper heat-resistant injection mould piece.

WHO: Eureka / Intama / PT Dinamika **COST:** IDR 300k–8M (SGD 21–570)

Two Products — Two Tracks

Product	Shell Type	Primary Track	Backup Track	Final Destin
Spice / Halal Kit	Semi-hard EVA, ~travel-kit size	Track 1 (bag makers)	Track 2 (3D print first)	China f actory
Cooking Kit Shell	Heat-resistant moulded shell	Track 2 (3D print first)	Track 3 (injection mould)	China f actory

KEY TIP: Go to FabLab Bandung first this week — free consultation, on-site machines, and you can leave with a rough 3D-printed shape in hours. Take that shape to the other makers for accurate quotes.

TRACK 1 — SEMI-HARD CASE / BAG MAKERS (Spice Kit Shell)

These are Bandung bag and case manufacturers who can produce the semi-rigid EVA outer shell with custom compartments. Bandung is Indonesia's bag manufacturing capital — these people do this every day.

1 Eureka Indonesia

Bandung, West Java

WA / PHONE

081317098975

WEBSITE

eureka.id/konveksi-tas-koper-di-bandung

GOOD FOR

Semi-hard & hardcase kits — polycarbonate, ABS, EVA. Does free samples.

& Explicitly offers FREE sample/prototype before any bulk commitment — start here.

EST. PRICING

Sample: IDR 300k–800k (SGD 21–57). Production MOQ negotiable.

2 Intama Bagmaker

Kab. Bandung — Banjaran / Margahayu (Taman Kopo Indah Blok B2-4A No.11)

WA / PHONE

0822-4045-8686

WEBSITE

intamakonveksi.com

GOOD FOR

Structured kit cases, custom compartments. Does prototype sample then final sample.

& Clean 2-stage sample process: prototype sample (shape check) !' final sample (real materials).

EST. PRICING

DP 50% before prototype. Sample: IDR 300k–1M (SGD 21–71).

3 Bagprovider

Bandung (serves national + HK clients)

WA / PHONE

Contact via website

WEBSITE

bagprovider.com/pabrik-tas-koper-bandung

GOOD FOR

Structured bag cases, rigid casing, international client experience.

& Has produced samples for Hong Kong clients — understands export-quality expectations.

EST. PRICING

Sample pricing on request — contact directly.

4 Yeye Bags

Bandung (first-hand supplier)

WA / PHONE

Contact via website

WEBSITE

yeyebags.com/konveksi-tas-custom-di-bandung

GOOD FOR

Custom semi-rigid cases, open to 1-piece sample discussions.

& Positioned as a first-hand (no middleman) supplier — potential for lower sample cost.

EST. PRICING

Sample pricing on request.

5 OSCAS

Bandung

WA / PHONE

Contact via website

WEBSITE

oscas.co.id

GOOD FOR

Modern machinery, high-volume but does custom samples too.

& Good if you want a more industrial-feel finish on the prototype.

EST. PRICING

Sample pricing on request — larger facility.

TRACK 2 — 3D PRINTING PROTOTYPE MAKERS (Both Products — Best First Step)

3D printing is your fastest and cheapest way to get a physical object in your hands before committing to any mould or case maker. For the cooking kit specifically, ABS, Nylon, and Carbon Fibre Composite can withstand heat — suitable for a first functional prototype. Both products should start here.

6 DR3D Indonesia & RECOMMENDED FIRST CONTACT

Bandung + Jakarta (serves both, operates online)

WA / PHONE

085875333516

WEBSITE

dr3d.co.id

GOOD FOR

Industrial & mechanical prototypes. Materials incl. Carbon Fibre, Kevlar, Nylon, ABS, PC.

EST. PRICING

IDR 200k–2M per piece (SGD 14–142) depending on size & material.

& **ONLY provider found with Carbon Fibre + Kevlar materials — critical for heat-resistant cooking kit shell.**

7 Sultan 3D Printing

Bandung

WA / PHONE

Contact via website

WEBSITE

sultan3dprinting.com

GOOD FOR

Fast turnaround (24h for small pieces). All-in pricing, no hidden charges.

EST. PRICING

All-in per piece — contact for quote. Free Zoom consultation.

& **24-hour service good for quick shape iterations. Free consultation before committing.**

8 Evolusi 3D

Serves Bandung (ships or pickup)

WA / PHONE

Contact via website

WEBSITE

evolusi3d.com/jasa-3d-print/

GOOD FOR

Standard 3D printing range, safe delivery to Bandung.

EST. PRICING

Contact for quote per piece.

& **Good backup option if DR3D or Sultan have a waiting list.**

Materials Guide — What to Ask For

Material	Heat Resistance	Strength	Best For	Approx. Cost
ABS	Medium (~80°C)	Good	Spice kit shell first prototype	Low
PETG	Medium (~80°C)	Good	Semi-rigid enclosures	Low
Nylon (PA)	High (~120°C)	Very Good	Cooking kit — functional prototype	Medium
Polycarbonate (PC)	High (~130°C)	Excellent	Cooking kit — tougher test piece	Medium-High
Carbon Fibre Composite	Very High (150°C+)	Superior	Cooking kit — ideal first prototype	Higher

For the cooking kit shell: ask for Nylon or Carbon Fibre Composite (DR3D has both). For the spice kit: ABS or PETG is fine for the first shape test.

TRACK 3 — INJECTION MOULDING (Cooking Kit Shell — When Design is Finalised)

Use these only after your design is locked. Injection moulding requires building a physical mould first (expensive), but produces the closest result to final China-factory quality. These companies are in Greater Jakarta — reachable for a day trip or via courier/email.

9

PT Dinamika Polimerindo

Jurumudi, Tangerang (Greater Jakarta) — Jl. Abdul Rachman Saleh No.8

WA / PHONE

info@polimerindo.com (email first)

WEBSITE

polimerindo.com

GOOD FOR

Full service: 3D design !' prototype !' low-volume injection moulding.

EST. PRICING

Low-vol prototype: IDR 2M–8M (SGD 142–570). Mould build: more.

& BEST for cooking kit — they do 3D design + prototype + mould in one place.

10

PT Daijo Industrial

Kawasan Berikat Nusantara, Jakarta Utara

WA / PHONE

Contact via website

WEBSITE

daijo.co.id

GOOD FOR

Precision moulding tools + plastic injection. End-to-end design to production.

EST. PRICING

Contact for quote.

& Good for precision parts. Better for when you need exact engineering tolerances.

11

Presisi Group

Cileungsi / Cimanggis, Greater Jakarta

WA / PHONE

Contact via website

WEBSITE

presisiplastics.co.id

GOOD FOR

In-house mould design, manufacturing and maintenance. Wide machine range.

EST. PRICING

Contact for quote.

& One of the few Indonesian companies with full in-house mould capability.

TRACK 4 — MAKERSPACE / FABLAB (Consult + Build First, Cheapest Option)

Go here FIRST if you want to consult face-to-face, try different materials, and walk away with a rough prototype the same day. No MOQ. Pay only for machine time and materials used. They also have people who can help translate your concept into a 3D file.

12

FabLab Bandung & GO HERE FIRST

Jl. Kopo No. 78, Bangunan Gusto Lantai 2, Bandung (first FabLab in West Java)

WA / PHONE

+62 895 6060 73321

WEBSITE

fablabs.io/labs/fablabbandung

GOOD FOR

3D printers, laser cutters, CNC machines on-site. Can build rough prototype same day.

EST. PRICING

Machine hour rate only — IDR 50k–200k per session (SGD 3.55–14). No MOQ.

& Non-profit, open-access. Can help sketch your concept !' 3D file !' print in same visit.

PRICING COMPARISON

All makers — estimated cost for 1–2 prototype pieces

#	Maker	Track	Service	Est. Cost (IDR)	Est. Co
12	FabLab Bandung	T4	3D print rough + consult	IDR 50k–200k	SG
7	Sultan 3D	T2	3D print prototype piece	IDR 150k–800k	SG
6	DR3D Indonesia &	T2	Industrial 3D prototype (ABS/CF)	IDR 200k–2M	SG
1	Eureka Indonesia	T1	Semi-hard EVA case sample	IDR 300k–800k	SG
2	Intama Bagmaker	T1	Prototype + final sample (2-stage)	IDR 300k–1M	SG
3	Bagprovider	T1	Custom case sample	TBC — request quote	TBC
4	Yeye Bags	T1	Custom case sample (1 piece)	TBC — request quote	TBC
5	OSCAS	T1	Custom case sample	TBC — request quote	TBC
9	PT Dinamika	T3	3D design + low-vol prototype mould	IDR 2M–8M	SG
10	PT Daijo	T3	Precision mould + injection piece	TBC — request quote	TBC
11	Presisi Group	T3	Mould design + injection mould	TBC — request quote	TBC

Exchange rate used: 1 SGD "H IDR 14,079 (June 2026). All prices are estimates from industry research — get formal quotes before committing to anything.

Quick Decision Matrix

Situation	Who to Contact First
I just want to see a rough shape today — cheapest possible	FabLab Bandung — walk in or WhatsApp now
I have a 3D file and want a quality industrial print	DR3D Indonesia (WA: 085875333516)
I want the spice kit case made in actual semi-hard EVA material	Eureka Indonesia first (free sample), then Intama
I want the cooking kit shell in heat-resistant material	DR3D (Nylon/CF) !' then PT Dinamika for mould
I want someone to help me design the product from scratch	FabLab Bandung (has design help on-site)
I want a near-final injection moulded piece	PT Dinamika Polimerindo (Jakarta) — but have design ready

WHATSAPP MESSAGE TEMPLATES

Bahasa Indonesia — ready to send to each maker

Three template types below, each tailored to the maker category. Attach your reference image/sketch when you send. Personalize [NAMA ANDA] with your name.

TEMPLATE A — For Bag/Case Makers (Eureka, Intama, Bagprovider, Yeye, OSCAS)

Halo, selamat siang.

Perkenalkan, nama saya [NAMA ANDA]. Saya seorang entrepreneur yang sedang berada di Bandung dan sedang mengembangkan dua produk baru yang membutuhkan prototype fisik.

Produk pertama yang ingin saya buat prototyp-nya adalah sebuah SPICE KIT — semacam tempat penyimpanan bumbu masak dalam format travel kit. Materialnya saya inginkan semi-hard casing (bukan softcase biasa), mirip dengan hardcase koper kecil, namun ukurannya sebesar travel kit toiletries. Di dalamnya bisa ada insert/tray untuk menyimpan botol bumbu masak. Saya hanya butuh 1–2 buah prototype dulu untuk melihat bentuk, ukuran, dan material yang cocok. Desain masih dalam tahap awal (akan saya kirimkan referensi gambar).

Boleh saya tanya:

1. Apakah Anda bisa membuat prototype/sample sejenis ini dalam jumlah satuan (1–2 pcs)?
2. Berapa estimasi harga untuk pembuatan sample-nya?
3. Berapa lama waktu yang dibutuhkan?
4. Material apa saja yang tersedia untuk casing semi-hard seperti ini (EVA, ABS, Polycarbonate)?

Saya akan segera kirim referensi gambar dan ukuran kasar setelah menerima respon Anda.

Terima kasih banyak, ditunggu ya!

[NAMA ANDA]

TEMPLATE B — For 3D Printing Makers (DR3D, Sultan 3D, Evolusi 3D)

Halo, selamat siang.

Perkenalkan, nama saya [NAMA ANDA]. Saya entrepreneur yang sedang di Bandung, sedang develop dua produk consumer goods dan butuh bantuan pembuatan prototype via 3D printing.

Produk 1 — SPICE KIT CASING: Casing semi-hard ukuran travel kit (~20x12x8 cm estimasi), bisa dicetak dulu untuk cek bentuk. Material: ABS atau PETG cukup untuk awal.

Produk 2 — COOKING KIT SHELL: Ini yang lebih kritis. Butuh casing yang tahan panas karena produk ini bersentuhan dengan peralatan memasak portable. Material idealnya Nylon, Polycarbonate, atau Carbon Fibre Composite.

Pertanyaan saya:

1. Apakah Anda memiliki material Nylon / Carbon Fibre Composite untuk cetak 3D?
2. Berapa estimasi harga per piece untuk ukuran kira-kira 20–25 cm?
3. Apakah Anda juga menyediakan jasa desain 3D jika saya hanya punya referensi gambar 2D?
4. Berapa lama waktu pengerjaan untuk 1–2 piece prototype?

Saya akan kirimkan referensi gambar segera. Terima kasih!

[NAMA ANDA]

TEMPLATE C — For Injection Moulding Companies (PT Dinamika, PT Daijo, Presisi)

Dear Tim PT [NAMA PERUSAHAAN],

Perkenalkan, saya [NAMA ANDA], entrepreneur yang sedang mengembangkan produk consumer goods.

Saya sedang mencari mitra untuk pembuatan prototype dan nantinya low-volume production dari sebuah COOKING KIT SHELL — casing/housing untuk peralatan masak portable yang harus tahan panas.

Tahap saat ini:

- Desain masih dalam proses finalisasi (referensi gambar akan dikirimkan)
- Butuh 1–2 pcs prototype untuk validasi bentuk dan material
- Setelah prototype disetujui, akan dilanjut ke tahap mould dan produksi

Pertanyaan:

1. Apakah Anda melayani pembuatan prototype (pre-production) dalam jumlah 1–2 pcs?
2. Jika iya, berapa estimasi biaya untuk prototype injection moulded piece dengan material tahan panas?
3. Apakah Anda juga menerima jasa 3D design jika kami hanya memiliki referensi gambar?
4. Berapa lama timeline dari approval desain hingga prototype selesai?

Saya berencana mengunjungi Jabodetabek dalam waktu dekat untuk bertemu langsung jika memungkinkan.

Terima kasih atas perhatiannya.

Hormat saya, [NAMA ANDA]

TEMPLATE D — For FabLab Bandung (Walk-In or WhatsApp)

Halo FabLab Bandung, selamat siang!

Saya [NAMA ANDA], entrepreneur yang sedang berada di Bandung. Saya sedang develop dua produk baru:

- (1) Spice Kit — casing semi-hard untuk bumbu perjalanan
- (2) Cooking Kit Shell — casing tahan panas untuk peralatan masak portable

Saya ingin konsultasi dan kalau memungkinkan langsung buat rough prototype 3D print-nya di sana.

Apakah memungkinkan untuk datang langsung minggu ini? Dan apakah ada yang bisa bantu untuk konversi referensi gambar ke file 3D untuk bisa langsung dicetak?

Terima kasih, ditunggu balasannya!

[NAMA ANDA]
